## Qualification Test Process

The test process involves:

1. Adding or modifying a context within a given scenario to elicit different emotions.
2. Annotating the emotions evoked in both scenarios.

### Template for Qualification Test

#### Event:

Lora saw her husband sleeping with her baby on the couch and the mess in the living room

#### 1) Central Character:

Lora

#### 2) Context Type:

\* Choose one context type from Time/Place/Agent to add or change in the event.

\* You can find more detailed information below.

Place

#### 3) Scenarios

\* Add or alter only contextual factors to create two scenarios of eliciting distinct emotions.

#1:

Lora saw her husband sleeping with her baby on the couch and the mess in the living room at her uncle's house.

**Emotion:**

Anger

**#2:**

Lora saw her husband sleeping with her baby on the couch and the mess in the living room at the hotel.

**Emotion:**

Annoyance

## What is the context?

There are various definitions of context, but in this task, we define it as time, place, and agent, and only allow changes to these elements.

The types of context that can be modified are listed below. Please read them carefully.

### Time

Information that provides temporal details:

- Time of Occurrence: e.g., 7 a.m.
- Duration: e.g., for 3 hours
- Sequence: e.g., before an exam
- Frequency: e.g., once a week

### Place

The physical environment where the event occurs:

- e.g., at the park, at the airport
